Program objectives

After graduation, graduates are able to:

PO 1 (Professional competency and ethics): Work ethically and professionally in environmental management and protection, pollution control, and climate change responses.

PO 2 (Career development): Continue to study and research for self-development and career advancement, creatively contributing to the development of environmental science.

PO 3 (Social responsibility): Participate in sustainable agricultural and rural development, bringing international integration of Vietnam's agriculture through education on environmental protection policies, technical consultation, and technology transfer to the community, making changes in the way of thinking and implementing agricultural production of the Vietnamese people toward environmental protection
